Intangibles and Sustainability

The analysis of intangibles has become an increasingly important part of company valuation

- Historically, financial markets valued companies mostly on the basis of their tangible assets (i.e. book value)
- Over the past 2 decades, markets value companies beyond their book value
- What are 'intangible assets':
 - i. <u>Human capital</u>
 - ii. Intellectual
 - iii. Relational
 - iv. Structural

Source: Interbrand: Brand Value Management (2006)

- Investment professionals can no longer overlook the value of intangibles
- → Sustainability criteria act as a proxy to quantify the value of a firm's intangibles assets

The measurement of sustainability ...

Trends

Economic

- Interconnectivity
- Deregulation
- Accountability
- Innovation speed
- Global trade
- Access (information, capital)
- Ageing infrastructure

Ecological

- Instability of ecological systems
- Climate Change
- Biodiversity
- Scarcity of natural resources (water, energy, soil)

Socio-cultural

- Transparency
- Healthy living
- Ageing population
- Demographic changes
- Social tensions
- Urbanization

SAM's evidence

Sustainability research delivers added-value to investors

Description

Scope: DJSI Participants,

ex. financials

Time frame: 2002-2006 (5 years)

Geography: Global, ex. Japan

Sustainability metric: Total score

Number of companies: 1342 (pooled set-up)

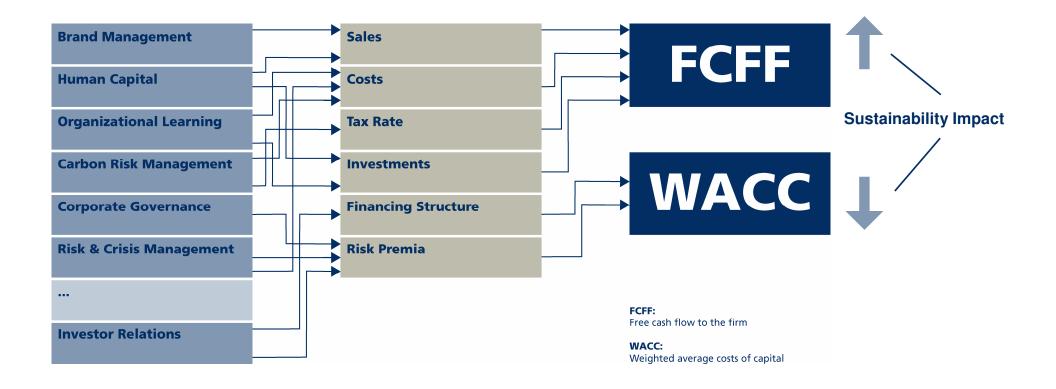

Statistical method: One sample t-test

- Sustainability trends impact firm fundamentals (e.g. return on invested capital)
- Markets are getting increasingly efficient at pricing-in sustainability considerations
 - Markets punish sustainability worse-performers heavily
 - Markets only reward sustainability best-performers

Integration in the financial analysis

Sustainability influences Shareholder Value

Trends Give Rise to Opportunities

ENERGY

WATER

RESOURCE EFFICIENCY

HEALTHY LIVING

CLIMATE CHANGE

SAM's latest evidence

Sustainability research delivers added-value to investors

Description

Scope: DJSI Participants

Time frame: 2001-2007 (7 years)

Geography: Developed markets

Sustainability metric: Total score

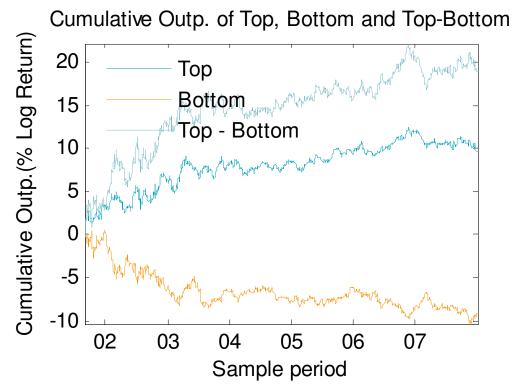

Number of companies: approx. 500 p.a.

Statistical method: Portfolio back-testing

Restrictions: Size, sector, region

neutrality

	Q1	Q5	Q1-Q5
Outp. (%)	1.48	-1.41	2.88
TE (%)	2.93	3.08	4.63
IR	0.50	-0.46	0.62
T-Stat	1.29	-1.17	1.60
Beta	1.00	1.03	-0.03

- SAM's sustainability data has predictive power for stock-picking, as shown by the positive information ratio (0.5) of the portfolio containing sustainability leaders
- Added value is created both from picking sustainability leaders and avoiding sustainability laggards
- Value creation remains relatively stable over the entire back-testing period

Conclusions

The aim of sustainability investing is creating alpha

- Sustainability trends and challenges change the competitive environment in which firms operate.
- Sustainability with opportunities and risks is a strategic success factor
- The impact of these "sustainability" trends and factors is still underresearched and largely unconsidered by financial markets.
- Sustainability criteria allow to truly assess a company's competitive positioning and intrinsic value.
- These insights need to be integrated in stock selection in order to generate alpha.
- A larger number of financial products is integratating sustainability in the investment process
